Allowable Subject Matter

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance: The instantly claimed invention is allowable over the cited prior art, because the cited prior art fails to disclose a process for removing nitric oxides and nitrous oxide from a gas by adding an amount of ammonia to the gas, wherein the gas comprises NO_x , N_2O , oxygen, and water, such that the ammonia is at a value $0.7 < x < 1.4$, wherein X is the voluminal ratio of ammonia/nitrogen oxides; causing the gas to circulate at temperatures ranging between 200 and 600°C, on a catalyst comprising a iron beta-zeolite.

Speronello et al. discloses a zeolite catalyst having an iron or copper promoter loading which is useful for reducing nitrogen oxides. Speronello et al. provides for introducing ammonia into a gas stream from about 0.7 to 2 moles of ammonia per mole of nitrogen oxides. The reaction is carried out at a temperature of from 200°C to 600°C (col. 3, lines 36-41). The gas is comprised of nitrogen oxides, oxygen, as well as water (col. 12, lines 56-63). Speronello et al. continues to teach wherein the iron beta-zeolite may also comprise a binder (col. 7, lines 60-62). The Si/Al ratio is significantly less than 30 (col. 7, lines 1-3). The catalyst is comprised of 1 wt% of iron (col. 3, lines 49-51). However, Speronello et al. does not disclose wherein the gas is comprised of nitrous oxides.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
